CONFERENCE ORGANIZERS INSTITUTES

The International Conference on Integrated Information is supported by the following Institutes:

Emerald Group Publishing Limited
Technological educational Institute of Athens, Greece
University of Peloponnese, Greece
National And Kapodistrian University of Athens, Greece
Mednet Hellas, The Greek Medical Network
2nd AMICUS Workshop

To learn more about I-DAS, including the Book Series, please visit the webpage http://www.i-das.org/
INTEGRATED INFORMATION

International Conference on Integrated Information

Kos, Greece September, 29 – October, 3 2011

EDITORS

Georgios A. Giannakopoulos
Technological Educational Institute of Athens, Greece

Damianos P. Sakas
University of Peloponnese, Greece

All papers have been peer-reviewed

Piraeus, Greece, 2011
Editors

Conference Details  
3

Keynote Speaker  
5

**SYMPOSIUM ON INFORMATION AND KNOWLEDGE MANAGEMENT**  
Prof. Christos Skourlas

Towards the Preservation and Availability of Historical Books and Manuscripts: A Case Study  
Eleni Galiotou  
8

An Extensive Experimental Study on the Cluster-based Reference set Reduction for Speeding-up the k-nn Classifier  
Stefanos Ougiaroglou, Georgios Evangelidis and Dimitris A. Dervos  
12

Exploiting the Search Culture Modulated by the Documentation Retrieval Applications  
Nikitas N. Karanikolas and Christos Skourlas  
16

Information and Knowledge Organization: The Case of the TEI of Athens  
Anastasios Tsolakidis, Manolis Chalaris and Ioannis Chalaris  
22

Providing Access to Students with Disabilities and Learning Difficulties in Higher Education through a Secure Wireless framework  
Catherine Marinagi and Christos Skourlas  
26

Improving Query Efficiency in High Dimensional Point Indexes  
Evangelos Outsios and Georgios Evangelidis  
30

Text Segmentation Using Named Entity Recognition and co-Reference Resolution in Greek Texts  
Pavlina Fragkou  
34

**KINISIS, a Graphical XQuery Language**  
Euclid Keramopoulos, Achilleas Pliakas, Konstantinos Tsekos and Ignatios Deligiannis  
42

Dimensionality Curse, Concentration Phenomenon and the KDB-tree  
Nikolaos Kouiroukidis and Georgios Evangelidis  
46
Applying Balanced Scorecard Strategic Management in Higher Education  
Manolis Chalaris, Anastasios Tsolakidis and Ioannis Chalaris  

A Web Portal Model for NGOs’ Knowledge Management  
Zuhal Tanrikulu  

The Digital Archives System and Application Optimized for the Tradition Knowledge Archives  

A Semi-automatic Emerging Technology Trend Classifier Using SCOPUS and PATSTAT  
Seonho Kim, Woondong Yeo, Byong-Youl Coh, Waqas Rasheed, Jaewoo Kang  

Presenting a Framework for Knowledge Management within a Web Enabled Living Lab  
Lizette de Jager and Albertus AK Buitendag and Potjie (JS) van der Walt  

4TH SYMPOSIUM ON BUSINESS AND MANAGEMENT AND DYNAMIC SIMULATION MODELS SUPPORTING MANAGEMENT STRATEGIES  
Dr. Damianos Sakas  

Evangelia N. Markaki, Damianios P. Sakas and Theodore Chadjipantelis  

Free Software – Open Source Software. A Powerful Tool for Developing Creativity in the Hands of the Student  
Nasiopoulos K. Dimitrios, Damianos P. Sakas, Konstantinos Masselos  

Open Source Web Applications. How it Spread Through the Internet and their Contribution to Education.  
Nasiopoulos K. Dimitrios, Damianos P. Sakas, Konstantinos Masselos  

Culture in Modern Times in the Frame of Luhmann’s System Theory  
Anastasia J. Chournazidis  

Managing Scientific Journals: A Cultural Viewpoint  
Marina C. Terzi, Damianos P. Sakas, and Ioannis Seimenis  

A Conceptual Framework for Analyzing Knowledge-based Entrepreneurship  
Nikos S. Kanellos
SESSION ON INFORMATION HISTORY: PERSPECTIVES, METHODS AND CURRENT TOPICS

Prof. Laszlo Karvalics

Emerging Research Fields in Information History
Laszlo Z. Karvalics

Information Management through Elementary Data Clusters: New Observations on Pridianum-Type Roman Statistical Documents
Gergő Gellérfi

Information and Secrecy on the Silk Road. Methods of Encryption of Legal Documents in Inner Asia (3th-4th century)
Szabolcs Felföldi

The Role of Information and Disinformation in the Establishment of the Mongolian Empire: A Re-examination of the 13th century Mongolian History from the Viewpoint of Information History
Márton Gergő Vér

Early Warning Systems and the Hospitallers in the Eastern Mediterranean
Zsolt Hunyadi

Information Management as Establishment Dutch Navigational Knowledge on Japan, 1608-1641
Gabor Szommer

Files Everywhere - Register and Training of Men for Military and Civil Purpose in Prussia in the early 18th century
Marton Holczer

SYMPOSIUM ON INTEGRATED INFORMATION: THEORY, POLICIES, TOOLS

Prof. Georgios Giannakopoulos

Approaching Information as an Integrated Field: Educating Information Professionals
Georgios Giannakopoulos, Daphne Kyriaki Manesi and Sryridon Zervos

Special Libraries as Knowledge Management Centers
Eva Semertzaki

Digital Libraries’ Developers and their Suitability: A Case Study
Maria Monopoli
A Preliminary Study for the Creation of a Greek Citation index in the Humanities and the Social Sciences (GCI – H&SS)  
Daphne Kyriaki-Manessi and Evi Sachini

Archiving as an Information Science. Evidence from a Survey Carried out on a Sample of Greek Students  
Georgios Giannakopoulos and Ioannis Koumantakis

S. Özlem Bayram and Fahrettin Ozdemirci

Government Information: Access and Greece’s Efforts for Access  
Aikaterini Yiannoukakou

School Archives and their Potentials in Teaching: Aspects of Greek Reality  
Sonia Geladaki and Panagiota Papadimitriou

Research on School Libraries in Greece and Suggestions on its Further Development  
Georgios D. Bikos

Building Digital Collections for Archeological Sites: Metadata Requirements and CIDOC CRM Extension  
Georgios S. Gkrous and Mara Nikolaidou

Museological Claims to Autonomous Knowledge: Rethinking the Conceptual Mode of Display and its Claims to Knowledge  
Assimina Kaniari and Georgios Giannakopoulos

Use of Library Loan Records for Book Recommendation  
Keita Tsuji, Erika Kuroo, Sho Sato, Ui Ikeuchi, Atsushi Ikeuchi, Fuyuki Yoshikane and Hiroshi Itsumura

Developing a National Database on Librarianship and Information Science. The Case of E-VIVA, the Hellenic Fulltext Database  
Filippos Ch. Tsimpoglou, Vasiliki V. Koukounidou and Eleni K. Sakka

Integrated Access to Cultural Heritage Information Pieces in Iran Astan-Quds Razavi’s Organization of Libraries, Museums and Documents Center: A Theory of Unionization Disparate Information Assets over Imam Reza's Zarih  
Ms. Mitra Zarei and Ms. Maliheh Farrokhnia

Attitudes of University Librarians and Information Scientists towards the Draft Code of
Library Ethics to Present a Model for Final Library Ethical Codes  
Mahsoomeh Latifi, Fatemeh Zandian and Hasan Siamian

SESSION ON OPEN ACCESS REPOSITORIES: SELF-ARCHIVING, METADATA, CONTENT POLICIES, USAGE  
Dr. Alexandros Koulouris

Geographical Collections in Greek Academic Libraries: Current Situation and Perspectives  
Ifigenia Vardakosta and Sarantos Kapidakis

Information Seeking Behavior: Factors that Affect the Behavior of Greek Astronomers  
Hara Brindesi and Sarantos Kapidakis

Aggregating Metadata for Europeana: The Greek Paradigm  
Alexandros Koulouris, Vangelis Banos and Emmanouel Garoufallou

Integrating a Repository with Research Output and Publications: The Case of the National Technical University of Athens  
Dionysis Kokkinos

Implementation of Workflows as Finite State Machines in a National Doctoral Dissertations Archive  
Nikos Houssos, Dimitris Zavaliadis, Kostas Stamatis and Panagiotis Stathopoulos

Practices of “Local” Repositories of Legally Protected Immovable Monuments. A Global Scheme for ‘Designation – Significance’ Information  
Michail Agathos and Sarantos Kapidakis

Integration of Metadata in BWMETA-2.0.0 Format  
Katarzyna Zamlynska, Jakub Jurkiewicz and Lukasz Bolikowski

SESSION ON EVIDENCE-BASED INFORMATION IN CLINICAL PRACTICE  
Dr. Evangelia Lappa

Applicability of Data Mining Algorithms on Clinical Datasets  
Wilfred, Bonney

Changing Roles of Health Librarians with Open Access Repositories  
Christine Urquhar and Assimina Vlachaki

From Medical Records to Health Knowledge Management Systems: The Coding to Health Sector  
Evangelia C. Lappa and Georgios A. Giannakopoulos
The Survey of Skill, Attitude and Use of Computer and Internet among Faculty Members
Hasan Siamian, Azita Bala Ghafari, Kobra Aligolbandi, Mohammad Vahedi and Gholam Ali Golafshani Jooybari

Trends in Scholarly Communication among Biomedical Scientists in Greece
Assimina Vlachaki and Christine Urquhart

SESSION ON ELECTRONIC PUBLISHING: A DEVELOPING LANDSCAPE
Dr. Dimitris Kouis

E-Journal and Open Access Journal Publishing in the Humanities: Preliminary Results from a Survey among Byzantine Studies Scholars
Victoria Tsoukala and Evi Sachini

Preliminary Results on a Printed VS Electronic Text Books Assessment Through Questionnaire
Dimitrios A. Kouis and Kanella Pouli

An Interpretation of Aristotelian Logic According to George Boole
Markos N. Dendrinos

SESSION ON INFORMATION CONTENT PRESERVATION AS OUTCOME OF CONSERVATION OF CULTURAL HERITAGE: ETHICS, METHODOLOGY AND TOOLS
Prof. George Panagiaris and Dr. Spiros Zervos

Intrinsic Data Obfuscation as the Result of Book and Paper Conservation Interventions
Spiros Zervos, Alexandros Koulouris and Georgios Giannakopoulos

Mass Deacidification: Preserving More than Written Information
Michael Ramin, Evelyn Eisenhauer and Markus Reist

Information Literacy of Library Users: A Case Study of Mazandaran Public Library Users, Iran
Hussein Mahdizadeh and Hasan Siamian

The Narratives of Paper in The Archives of the New Independent Greek State (Mid 19th c.)
Ourania Kanakari and Maria Giannikou

From Macro to Micro and from Micro to Nano: The Evolution of the Information Content Preservation of Biological Wet Specimen Collections
Nikolaos Maniatis and Georgios Panagiaris

Aims and Scope of the Conference

The International Conference on Integrated Information 2011 took place in Kos Island, Greece, between September, 29 and October, 3, 2011. IC-ININFO is an international interdisciplinary conference covering research and development in the field of information management and integration.

The conference aims at creating a forum for further discussion for an Integrated Information Field incorporating a series of issues and/or related organizations that manage information in their everyday operations. Therefore, the call for papers is addressed to scholars and/or professionals of the fields of Library and Archives Science (including digital libraries and electronic archives), Museum and Gallery Studies, Information Science, Documentation, Information Management, Records Management, Knowledge Management, Data management and Copyright experts the latter with an emphasis on Electronic Publications. Furthermore, papers focusing on issues of Cultural Heritage Management and Conservation Management are also be welcomed along with papers regarding the Management of Nonprofit Organizations such as libraries, archives and museums.

One of the primary objectives of the IC-ININFO will be the investigation of information-based managerial change in organizations. Driven by the fast-paced advances in the Information field, this change is characterized in terms of its impact on organizations that manage information in their everyday operations.

Grouping emerging technologies in the Information field together in a close examination of practices, problems and trends, IC-ININFO and its emphases on integration and management will present the state of the art in the field. Addressed jointly to the academic and practitioner, it will provide a forum for a number of perspectives based on either theoretical analyses or empirical case studies that will foster dialogue and exchange of ideas.

Topics of general Interest

Symposia

The Conference offered a number of sessions under its patronage, providing a concise overview of the most current issues and hands-on experience in information-related fields.

- Symposium on Integrated information: Theory, Policies, Tools
- 4th Symposium on Business and Management and Dynamic Simulation Models supporting management strategies
The wide range of aspects that the sessions covered, highlighted future trends in the Information Science.

**Paper Peer Review**

More than 300 papers had been submitted for consideration in IC-ININFO 2011. From them, 91 were selected for presentation, after peer review in a double blind review process. The accepted papers were presented at IC-ININFO 2011.

**Thanks**

We would like to thank all members that participated in any way in the IC-ININFO 2011 Conference and especially:

- The famous publishing house Emerald for its communication sponsorship.
- The co-organizing Universities and Institutes for their support and development of a high-quality Conference scientific level and profile.
- The members of the Scientific Committee that honored the Conference with their presence and provided a significant contribution to the review of papers as well as for their indications for the improvement of the Conference.
- All members of the Organizing Committee for their help, support and spirit participation before, during and after the Conference.
- The Session Organizers for their willing to organize sessions of high importance and for their editorial work, contributing in the development of valued services to the Conference.
- PhDc Marina Terzi for her excellent editorial work, contributing in the production of the Conference proceedings.

KEYNOTE SPEAKER

Professor Amanda Spink

Professor Amanda Spink has published over 340 scholarly journal articles, refereed conference papers and book chapters, and 6 books. Many of her journal articles are published in the Journal of the American Society for Information Science and Technology, Information Processing and Management, and the Journal of Documentation. She is Editor of the Emerald journal Aslib Proceedings. Amanda’s research has been published at many conferences including ASIST, IEEE ITCC, CAIS, Internet Computing, ACM SIGIR, and ISIC Conferences. Her recent books include Information Behavior: An Evolutionary Instinct and Web Search: Multidisciplinary Perspectives, both published by Springer. Amanda’s research focuses on theoretical and empirical studies of information behavior, including the evolutionary and developmental foundations. The National Science Foundation, the American Library Association, Andrew R. Mellon Foundation, Amazon.com, Vivisimo.com, Infospace.com, NEC, IBM, Excite.com, AlltheWeb.com, AltaVista.com, FAST, and Lockheed Martin have sponsored her research. In 2008 Professor Spink had the second highest H-index citation score in her field from 1998 to 2008 [Norris, M. (2008)]. Ranking Fellow Scholars and their H-Index: Preliminary Survey Results. Loughborough University, Dept of Information Science Report].
An Extensive Experimental Study on the Cluster-based Reference Set Reduction for Speeding-up the k-NN Classifier

Stefanos Ougiaroglou†, Georgios Evangelidis‡ and Dimitris A. Dervos‡

†University of Macedonia, Department of Applied Informatics, 54006, Thessaloniki, Greece
‡Alexander TEI of Thessaloniki, Department of Informatics, 57400, Sindos, Greece dad (at) it.teithe.gr

Abstract: The k-Nearest Neighbor (k-NN) classification algorithm is one of the most widely-used lazy classifiers because of its simplicity and ease of implementation. It is considered to be an effective classifier and has many applications. However, its major drawback is that when sequential search is used to find the neighbors, it involves high computational cost. Speeding-up k-NN search is still an active research field. Hwang and Cho have recently proposed an adaptive cluster-based method for fast Nearest Neighbor searching. The effectiveness of this method is based on the adjustment of three parameters. However, the authors evaluated their method by setting specific parameter values and using only one dataset. In this paper, an extensive experimental study of this method is presented. The results, which are based on five real life datasets, illustrate that if the parameters of the method are carefully defined, one can achieve even better classification performance.

Keywords: K-NN classification, Clustering, Data reduction, Scalability

1. INTRODUCTION

The data mining algorithms that assign new data items into one of a given number of categories (or classes) are called classifiers (Han and Kamber, 2000). Classifiers can be evaluated by two major criteria: classification accuracy and computational cost. k-NN is an extensively used and effective lazy classifier (Dasarathy, 1991). It works by searching the training data in order to find the k nearest neighbors to the unclassified item x according to a distance metric. Then, x is assigned into the most common class among the classes of the k nearest neighbors. Ties are resolved either by choosing the class of the one nearest neighbor or randomly. This work adopts the first approach.

However, the k-NN classifier has the major disadvantage of high computational cost as a consequence of the computations needed to estimate all distances between a new, unclassified, item and the training data. Thus, as the size of the training set becomes larger, the computational cost increases linearly.

Many researchers have focused on the reduction of the k-NN computational cost and therefore several speedup methods have been proposed. These methods are mainly based on either indexing (Samet, 2005; Zezula et al, 2006) or data reduction techniques (Wilson and Martinez, 2000; Lozano, 2007). Additionally to these methods, recent research proposed cluster-based approaches for speeding-up the k-NN classifier, such as, the Cluster-based Trees (Zhang and Srihari, 2004), the Representative-based Supervised Clustering Algorithms (Eick et al, 2004), and, the Reference Set Reduction method through k-means clustering (Hwang and Cho, 2007). This work focuses on the latter approach.

The Reference Set Reduction Method is an adaptive approach which provides three parameters. Its effectiveness depends on the adjustment of these parameters. Hwang and Cho presented experimental results obtained by specific parameter values and based on only one dataset. Moreover, they did not use the well known Euclidean distance as the distance metric. These observations constitute the motivation of our work. Thus, the contribution of this paper is an extensive experimental study on this method. It includes experiments on five real life datasets using different parameter values. We also use as a metric the Euclidean distance.

The rest of this paper is organized as follows. Section II considers in detail the Reference Set Reduction method through k-means clustering and discusses the adaptive schema that it provides. In Section III, we present an extensive experimental study based on five real life datasets. The paper concludes in Section IV.

II. REFERENCE SET REDUCTION THROUGH k-MEANS CLUSTERING

The Reference Set Reduction method (for simplicity, RSRM) proposed by Hwang and Cho is an effective speed-up approach. The method is outlined in Algorithm 1. It uses the well-known k-means algorithm (McQueen, 1967) to find clusters in the training set (lines 2–13). Afterwords, each one cluster is divided into two sets which are called “peripheral set” and “core set”. Particularly, the cluster items lying within a certain distance from the cluster centroid are placed into the “core set”, while the rest, more distant from the centroid, items are placed...
When a new item $x$ must be classified, the algorithm finds the nearest cluster $C_1$. If $x$ lies within the core area of $C_1$, it is classified by retrieving its $k$-nearest neighbors from $C_1$. Otherwise, the $k$ nearest neighbors are retrieved from the Reference Set $R$ formed by the items of the nearest cluster and the “peripheral” items of the $L$ most adjacent clusters (lines 25–29).

If the clusters were not divided and only the items of the nearest cluster were used to classify the new item (regardless of how distant from the centroid it was), many training items in the nearby clusters would be ignored. Thus, Hwang and Cho proposed the use of some nearby clusters as a safer approach. The main innovation in their method is that it uses only the peripheral items of these additional adjacent clusters. If all items (not only the peripheral) of these clusters were used, the computational cost would have been much higher.

A key factor of RSRM is the determination of the threshold that defines which items will be core and which peripheral. This is very critical since it determines how many items are accessed during classification. Hwang and Cho consider as peripheral items, those whose distance from the cluster centroid is greater than the double average distance among the items of each cluster. Thus, the average distance among the items in each cluster and the corresponding cluster centroid must be computed (line 15).

In this study, we do not use a particular threshold as Hwang and Cho did (they used the double average distance). We introduce parameter $D$ to be responsible for the splitting of the clusters into core and peripheral sets. An item $x$ is placed into the peripheral set of cluster $C$, if:

$$\text{Distance}(x, \text{centroid of } C) > D \times \text{AvgDist}_C$$

For example, if $D=1.5$, the “peripheral sets” include items that are more than 1.5 times the average distance away from the cluster centroid. The determination of $D$ is a critical issue and it should be made by considering the available number of clusters and the desirable trade-off between accuracy and computational cost.

Another issue that must be addressed is related to the number of clusters that are constructed (determination of the $k$ parameter in $k$-means algorithm) and the number of adjacent clusters that are examined when the new item lies within the peripheral area of the nearest cluster ($L$ parameter). Hwang and Cho
III. EXPERIMENTAL STUDY

The extensive experimental study was conducted using five real life datasets distributed by the UCI Machine Learning Repository1. The datasets are presented in Table 1. The fifth column lists the k value found to achieve the highest accuracy when using the k-NN classifier over the whole training set (conv-k-NN). The computational cost was estimated by counting the distance computations needed to carry out the whole classification task. Of course, the cost measurements do not include the distance computations needed by the k-means clustering preprocessing procedure. Moreover, contrary to Hwang and Cho, who used the ROC distance metric in their experiment, we estimated all distances using the Euclidean distance. All datasets were used without data normalization or any other transformation. Also, in all RSRM experiments, we chose the k values of the k-NN classifier that achieved highest accuracy (do not confuse this parameter with k of k-means clustering).

We define \( L = \lfloor \sqrt{k} \rfloor \) as Hwang and Cho did in their experiment. Concerning the k parameter that determines the number of clusters that are formed, we built 8 classifiers for each dataset. Classifier uses \( k = \lfloor \sqrt{n/2i} \rfloor \) clusters, \( i=1, \ldots, 8 \), where \( n \) is the number of items in the training set. Classifier is based on the rule of thumb that defines \( k = \lfloor \sqrt{n/2} \rfloor \) (Mardia et al, 1979). We decided to build classifiers that use low k values based on the observation that Hwang and Cho set \( k=10 \) for a training set with 60919 items. For each classifier, we chose a varying value for D (1, 1.5, and 2). Thus, we built and evaluated \( 8 \times 3 = 24 \) classifiers for each dataset.

In Fig. 1–5, for each dataset, the performance of the most accurate classifiers for a given cost are presented2. The figures do not include the performance of conv-k-NN that is mentioned in Table 1. In particular, in Fig. 1–5, the classifiers built by the three D values (1, 1.5 and 2) are compared to each other.

For the first three datasets (Fig. 1–3), the classifiers built for D=1 seem to perform better than the ones built for D=1.5 and D=2. In the cases of the Letter Image Recognition (LIR) and Magic Gamma Telescope (MGT) datasets, the superiority of the Classifiers D=1 is obvious. In the case of LIR, the two Classifiers D=1 presented in Fig 1 are build by setting \( k=\lfloor \sqrt{15000/2i} \rfloor =86 \), \( L=\lfloor \sqrt{86} \rfloor =9 \) and \( k=\lfloor \sqrt{15000/2i} \rfloor =21 \), \( L=\lfloor \sqrt{21} \rfloor =4 \), respectively. In MGT, the parameter values of the most accurate classifier are D=1, k=59 and L=7.

For the Landsat Satellite (LS) and Shuttle datasets (Fig. 4–5) there is not a dominant D parameter value in terms of performance and accuracy. In LS, the most

accurate classifier is built by setting $D=1$ and $k=16$, while the fastest classifier that achieves an accuracy value over 99.2% is built using $D=1.5$ and $k=23$. In Shuttle, the results are more confusing. This is because Shuttle is an imbalanced (skewed) dataset (approximately 80% of the items belong to one class). However, in Shuttle, all classifiers presented in Fig. 5 manage to achieve higher accuracy than that of the conv-k-NN.

**IV. CONCLUSION**

In this paper we presented an extensive experimental study on the Reference Set Reduction method through k-means clustering. In all experiments, the well-known Euclidean distance was used. The classification performance of RSRM depends on the determination of $k$ and $D$ parameters. In all cases, they should be adjusted by taking into consideration the application domain and the desirable trade-off between classification accuracy and computational cost. The experimental measurements indicate that if accuracy is more critical than cost, low $D$ and high $k$ and $L$ values (e.g. $D=1$) lead to an efficient classification method. On the other hand, if cost is more critical than accuracy, higher $D$ and lower $k$ and $L$ values may be more appropriate.
